- Internet Explorer 6 Service Pack 1 on Windows 2000 Service Pack 4
- Internet Explorer 6 on Windows XP (Home/Professional) Service Pack 2
- Internet Explorer 7 on Windows XP (Home Professional) Service Pack 2
- Internet Explorer 7 on Windows Vista

* Subject to change based upon Microsoft's Support Lifecycle policies for Internet Explorer and Windows Operating System

Minimum Screen Resolution: 1024 x 768

Internet Connection Required: **56K Modem Minimum, High Speed Broadband (Cable or DSL) Recommended**

Key New Feature Details

Broker Level Reports

- Broker/Firm Level Reports can be created and shared between offices

Themed Stationery

- Predefined stationery background images that can be applied to reports and CMA presentations at runtime. Examples of stationery image options include lifestyle themes (i.e. sailing, tennis) and seasonal themes (i.e. beach, autumn leaves).
- The thumbnail preview library of stationery options is accessed by the new stationery icon located at:
 - The Search Details screen beside the menu of available report formats; and
 - The CMA Wizard, on the View Reports tab beside the Report Page controls.
- Stationery applied to listing reports in search results is displayed on screen, when printed or saved to a PDF, and when emailed.
- Stationery can be applied to a single report in a CMA or all reports in the CMA.

Enhanced Hyperlinks Capabilities in Reports

- Allows hyperlinks to application features (mapping, mortgage calculator) and external sites (schedule showings, neighborhood information, etc.) from within reports.
- Hyperlinks can be text labels, field values or images.
- Listing and member information can be included in the link variables, allowing the external site to recognize the user and identify the property.
- Where appropriate links can be included in emailed reports, such as to the property map.

Virtual Tour Domain Validation Tool

- This staff tool allows the board to maintain a list of approved virtual tour vendors' domains.

- An error message is displayed in the listing maintenance form if a user enters an “invalid” tour URL. Field-level pop-up help can be used to instruct the user to email an administrator the URL for inclusion in the list of valid domains.
- Validation can be applied to all URL fields, just some (e.g. applied to Non-branded VT field but not to Branded VT field), or to no fields at all.

New Features and Feature Enhancements

Ref ID	Summary
16001	Support for Firm-level reports added to Report Editor
18006	Changed icon for Report Data Error to a yellow warning sign to be more noticeable
21694	Resolved issue with setting the order of fields in the listing maintenance module
23461	Ability to include SmartLinks in reports as the hyperlink tied to a data field, plain text label, or image
26218	Change tab order for the login screen to: 1) User ID, 2) Password, 3) Sign In, then 4) Forgot Your Password. Place focus in Password field on login screen if User ID already has a value (populated from a cookie)
27117	Predefined Stationery that can be applied to reports and CMA presentations at runtime
27156	In LMM, F7 or ALT-DOWN ARROW auto-expands any field that allows over 50 characters
27163	Ability to auto expand all pick list and expanding text input fields in listing maintenance after the F7 key has been pressed in any field.
27173	Ability to use an MLS-defined logical sort order on Property Type and Status, rather than just alphabetic sort order
28272	Added Vista-specific text to instructions displayed when installing ActiveX controls
29504	In LMM, when the pick list is open with the F7 key, it will now default to the first option on the list.
29603	Added grid size options to vary the grid spacing in the Report Editor (i.e., 4 points per inch, 6 points per inch etc)
29604	Report Preview option added to Design mode of Report Editor
30441	Fields in Client/Contact Info form now allow ampersands and select other non-alpha characters
30612	Provide MLS Staff the ability to change the MLX Pro email address
30662	Ability to include link from listing report to consumer-friendly map and make this link available on emailed reports
30867	Add Movie file extensions to valid Attachment Types table. Extra fees applies
31365	In all details screens where the displayed content cannot be emailed -- such as the listing detail Map -- do not display the Email button
31422	Provide MLS staff a tool to maintain a list of valid domains for virtual tours. Only virtual tour URLs for domains on this list are considered valid and other URLs are not accepted. [Optional feature]
31498	Ability to search for a particular field name when creating grids in the Column Manager
31499	Multi-field sort menus display each field's full name, rather than just column caption
31500	Ability to search for a particular field name when designing reports in the Report Editor
31715	Added a 'Current Violation Status' section to the member record on the Options & Statistics Tab. This section displays the Action, Time, and current Access Flag of the member, and staff has been given the ability to 'Clear' the violation to grant the member immediate access to the system.

Ref ID	Summary
32302	The listing detail map has been changed to always print a large map at a consistent size with the address and other basic listing data displayed below the map.
32337	User-friendly enhancements to integrated Tax auto-pop dialog – added Help text and hide pick lists when there is only 1 possible choice
32904	Support for viewing all pages of multi-page flyer reports, both within the application as well as in emailed reports and on client's personal sites
32951	More user-friendly dialog displayed when running a saved search for which the criteria has just been changed
33012	System tool for configuring site-wide geographic IDX Search areas to be displayed on map
33085	Ability to specify site-wide display order of image names shown in image submission process
33103	Ability to set PAR Field History report as Default PAR report
33395	Ability to include hyperlinks in PAR Field History reports
31519	Remove the “Best fit columns is enabled” warning message when widening columns
29961	Add Multi-Field Sort to MLXchange results screen
20944	Open House search details screen include checkbox to selecting listings.
	Accounts using SafeMLS login -- the SAFEMLS token is no longer encrypted (is visible with typing)
31356	Added “Not Equal” operator to ML# search field
31273	Added Status filter option to search results to History Search results screen.

Defects Corrected

Ref ID	Summary
